                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
J. Bacteriol. 169:4271-4278(1987).

-!- FUNCTION: Production of extracellular glucans, that are thought to play a key role in the development of the dental plaque because of their ability to adhere to smooth surfaces and mediate the aggregation of bacterial cells and food debris.

-!- CATALYTIC ACTIVITY: Sucrose + (1,6-alpha-D-glucosyl)(n) = D-fructose + (1,6-alpha-D-glucosyl)(n+1).

-!- SUBCELLULAR LOCATION: Secreted.

-!- MISCELLANBOUS: GTP-I synthesizes water-insoluble glucans (alpha 1,3-linked glucose and some 1,6 linkages), GTF-S synthesizes wether-soluble glucans (alpha 1,6-glucose). GTF-SI synthesizes both
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ueda S., Shiroza T., Kuramitsu H.K.; "Sequence analysis of the gtfC gene from Streptococcus mutans GS-5."; Gene 69:101-109(1988).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           STRAIN=GS-5;

I. CATALYTOR: Production of extracellular glucans, that are thought to play a key role in the development of the dental plaque because of their ability to adhere to smooth surfaces and mediate the aggregation of bacterial calls and food debris.

C. TATALYTIC ACTIVITY: Sucrose + (1,6-alpha-D-glucosyl)(n) = D-fluctose + (1,6-alpha-D-glucosyl)(n+1).

C. SUBCELLULAR DOCATION: Secreted.

I. SIJIKEd glucose and some 1,6 linkages), GTF-S synthesizes of water-resoluble glucans (alpha to be and some 1,6 linkages). GTF-SI synthesizes both

SIMILARITY: Belongs to the glycosyl hydrolase 70 family.
SIMILARITY: Contains 5 cell wall binding repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A repeat.
A repeat (incomplete).
Catalytic (approximate).
2.4 A, 1 C and 1 AC repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Glucosyltransferase-SI

Proc. Natl. Acad. Sci. U.S.A. 99:14434-14439(2002).

Play a key role in the development of the dental plaque because of their ability to adhere to smooth surfaces and mediate the agreegation of bacterial cells and food debris.

C.I. CATALYTIC ACTIVITY: Sucrose + (1,6-alpha-D-glucosyl)(n) = D-fructose + (1,6-alpha-D-glucosyl)(n+1).

MISCELLANEOUS: GTF-I synthesizes water-insoluble glucans (alpha 1,3-linked glucose and some 1,6 linkages), GTF-S synthesizes water-soluble glucans (alpha 1,6-glucose). GTF-SI synthesizes both forms of glucans.

C.I. SIMILARITY: Belongs to the glycosyl hydrolase 70 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This Swiss-Prot entry is copyright. Biorechnol. 21:1307-1313(2003).

-!- FUNCTION: This regulatory protein, when combined with SAM (S-adenosylmethionine) represses the expression of the methionine regulon and of enzymes involved in SAM synthesis (By similarity).
-!- SUBGNIT: Homodiner (By similarity).
-!- SUBCELLUAR LOCATION: Cyroplasmic (By similarity).
-!- DOMAIN: Does not bind DNA by an helix-turn-helix motif.
-!- SIMILARITY: Belongs to the metJ family.
                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Photorhabdus luminescens (subšp. laumondii).

-!- FUNCTION: This regulatory protein, when combined with SAM (S-adenosylmethionine) represses the expression of the methionine regulon and of enzymes involved in SAM synthesis (By similarity).

-!- SUBCENTI: Homodimer (By similarity) as SUBCELLIAR LOCATION: Cytoplasmic (By similarity).

-!- DOMAIN: Does not bind DNA by an helix-turn-helix motif.

-!- SIMILARITY: Belongs to the metJ family.
                                                                                                                                                                                                                                                                                   Bacteria, Proteobacteria, Gammaproteobacteria, Enterobacteriales,
Enterobacteriaceae, Yersinia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nat. Biotechnol. 20:1118-1123(2002).
-!- FUNCTION: This regulatory protein, when combined with SAM (Sadenosylmethionine) represses the expression of the methionine regulon and of enzymes involved in SAM synthesis (By similarity).
-!- SUBUNIT: Homodimer (By similarity).
                                                                                                                                                                                                                                                                                                                                                   EMBL; CR546612; CAH012511, -; Genomic DNA.

(strain SS9)).
Bacteria; Proteobacteria; Gammaproteobacteria; Vibrionales;
Vibrionaceae; Photobacterium.
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- DOMAIN: Does not bind DNA by an helix-turn-helix motif.
-!- SIMILARITY: Belongs to the metJ family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match 55.3%; Score 47; DB 1; Length 104; Best Local Similarity 53.8%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                              Nature 406.477-483 (2000).

Nature 406.477-483 (2000).

-!- FUNCTION: This regulatory protein, when combined with SAM (S-adenosylmethionine) repressses the expression of the methionine regulon and of enzymes involved in SAM synthesis (By similarity).
-!- SUBUNIT: Homodimer (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- DOMAIN: Does not bind DNA by an helix-turn-helix motif.
-!- SIMILARITY: Belongs to the metJ family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            "Complete genome sequence of Vibrio vulnificus CMCP6.";
Submitted (DEC-2002) to the EMBL/Genbank/DDBJ databases.

-!- SUBUNIT: Homodimer (By similarity)
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- DOMAIN: Does not bind DNA by an helix-turn-helix motif.
-!- SIMILARITY: Belongs to the metu family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PubMed=14656965; DOI=10.1101/gr.1295503; Chen C.Y., Wu K.-W., Chang Y.-C., Chang C.-H., Tsai H.-C., Liau Y.-M., Chen H.-J., Shen A.B.-T., Liu Y.-M., Chen T.-L., Tsai S.-F., Lee C.-T., Tor L. Lancet 361:743-749(2003).

C -1- FUNCTION: This regulatory protein, when combined with SAM (S-adenosylmethionine) represses the expression of the methionine regulon and of enzymes involved in SAM synthesis (By similarity).

C -1- SUBUNIT: Homodomer (By similarity).

C -1- SUBCELLULAR LOCATION: Cytoplesmic (By similarity).

C -1- DOMAIN: Does not bind DNA by an helix-turn-helix motif.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
